This document is designed to provide SVRS users with a list of enhancements found in the latest AESM release (i.e. SR6 or 1.1.843.11). The document lists both cosmetic and functional enhancements. For additional information or clarifications, please refer to SVRS Online Help (F1) or the SVRS User Guides.

VOTER:

1. Absentee labels can be generated and printed after the ballot style is generated from the Voter node. From the Voter node, select the ***Process Voter As Absentee*** Quick Task (see Figure 1).

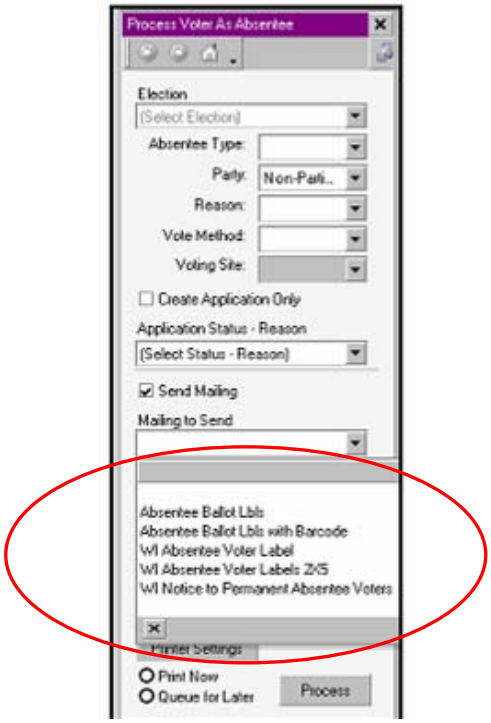

Figure 1 - Process Voter As Absentee Quick Task

2. Mailings can be generated for multiple voters in a single operation. From the Voter search grid, hold down the Ctrl key and left click (i.e. using your mouse) on voter names. Multiple voters will be highlighted (see Figure 2).

Figure 2 - Selected Voters

Select the ***Send Mailings*** Quick Task. The Quick Task window will appear. Select the type of mailing to be sent and click Next. The mailing for the highlighted voters will be generated and printed (see Figure 3).

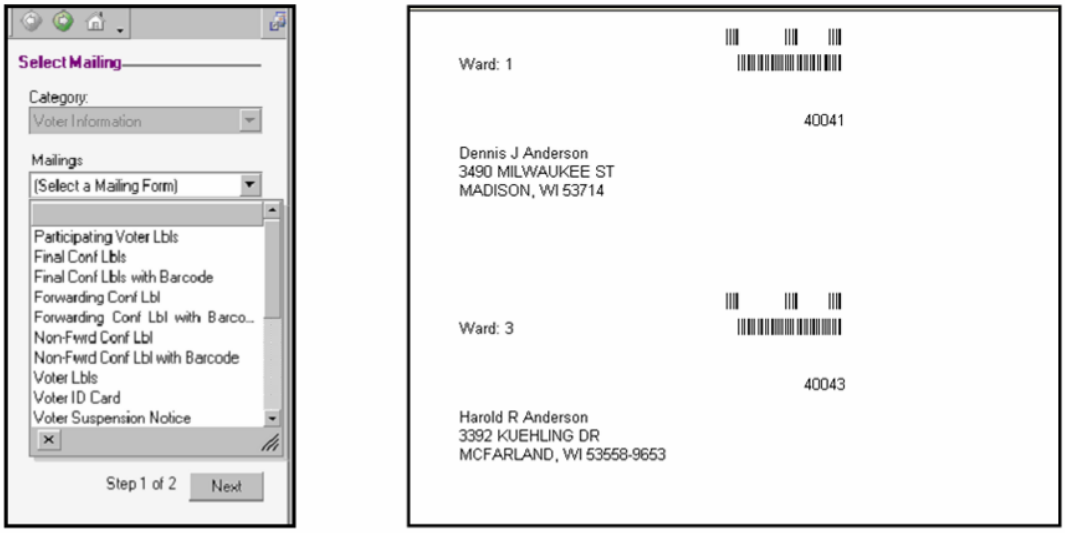

Figure 3 – Send Mailings Quick Task and Mailing Example

3. The Mailing Messages field has been added to the Process Absentee task pane. It allows you to select a message from the drop-down list or create a custom message. This field is only enabled if a valid document is selected and messages exist for the document (see Figure 7).

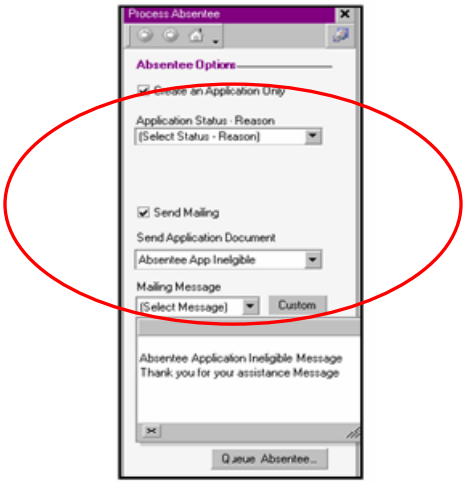

Figure 7 - Absentee Mailing Messages

ELECTIONS:

1. Both available and unavailable Polling Place Locations can be assigned for an election. The prefix (UNAVA) is displayed indicating that the polling place location has been marked as unavailable (see Figure 8).

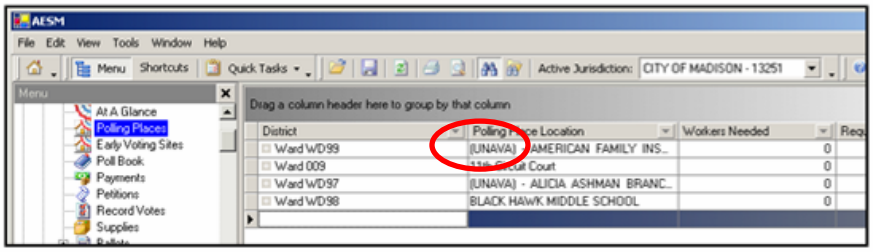

Figure 8 - Unavailable Polling Places

2. If your printer has duplex capabilities, SVRS has two duplex settings available: Horizontal and Vertical. Select the Printer Setup button and then Properties for the specific printer to see the Duplex drop-down list choices. Select either Horizontal or Vertical.

   On portrait printouts, the horizontal option prints front and back like turning the pages of a book. When selecting the vertical option, the pages are printed as if they are flipped over the top like a steno notebook (see Figure 20).

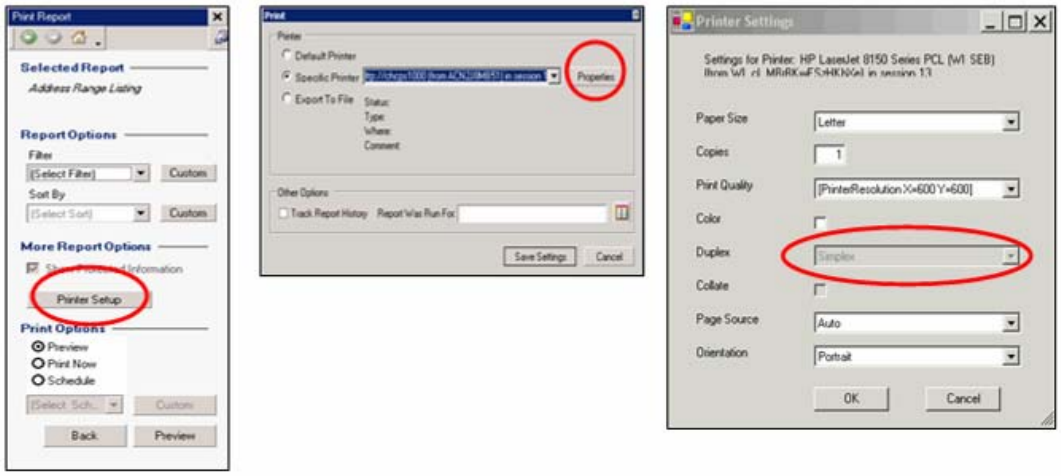

Figure 20 - Duplex Feature

3. When a report exceeds the system setting for printing (times out), a message will appear asking if you want to run the report as an Off-line report. At this point you must click "Yes" to export the report as a PDF to the file name you specified in Printer Setup. You can then download the report from the Hosting My Documents folder to your workstation as if you had originally requested the report to be exported (see Figure 21).

Figure 21 - Printer Timeout and Export as PDF

LABELS AND MAILINGS:

1. When selecting either the Queued Batch Mailings or Printed Batch Mailings node, the batch records are displayed without the individual nested records. You can select a batch and click the new **Preview Mailing Item(s)** Quick Task to view the individual records for the batch (see Figure 22).
